

Zad.1 Naszkicuj wykres funkcji:

a) $y = -2x + 1$

b) $y = \frac{1}{2}x - 3$

c) $y = 4x + 2$

1) Wyznaczamy punkty przecięcia prostej z osiami x, y i szkicujemy wykres:

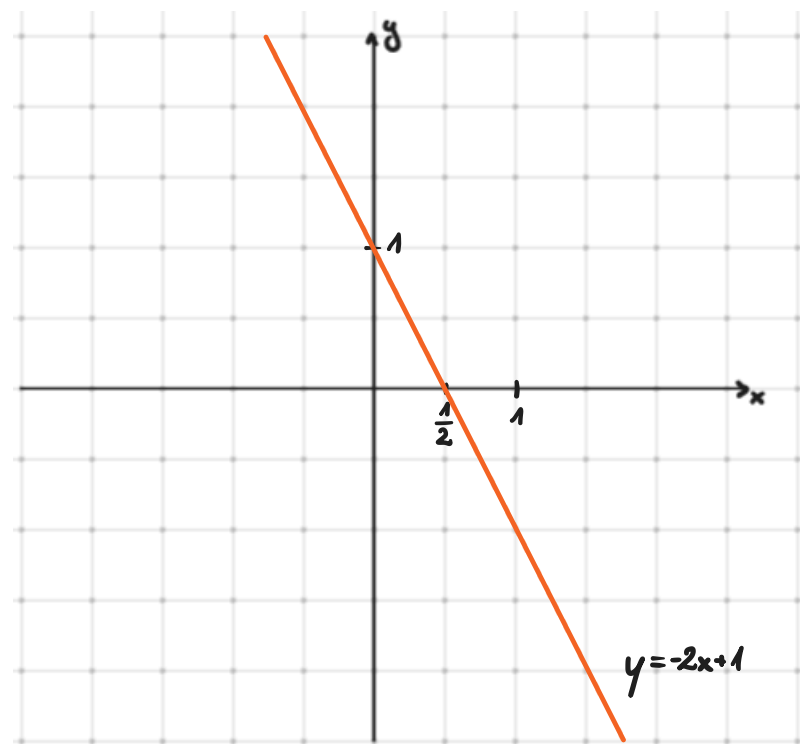

a) $y = -2x + 1$

$$f(0) = -2 \cdot 0 + 1 = 1$$

$$f(x) = 0$$

$$-2x + 1 = 0$$

$$x = \frac{1}{2}$$

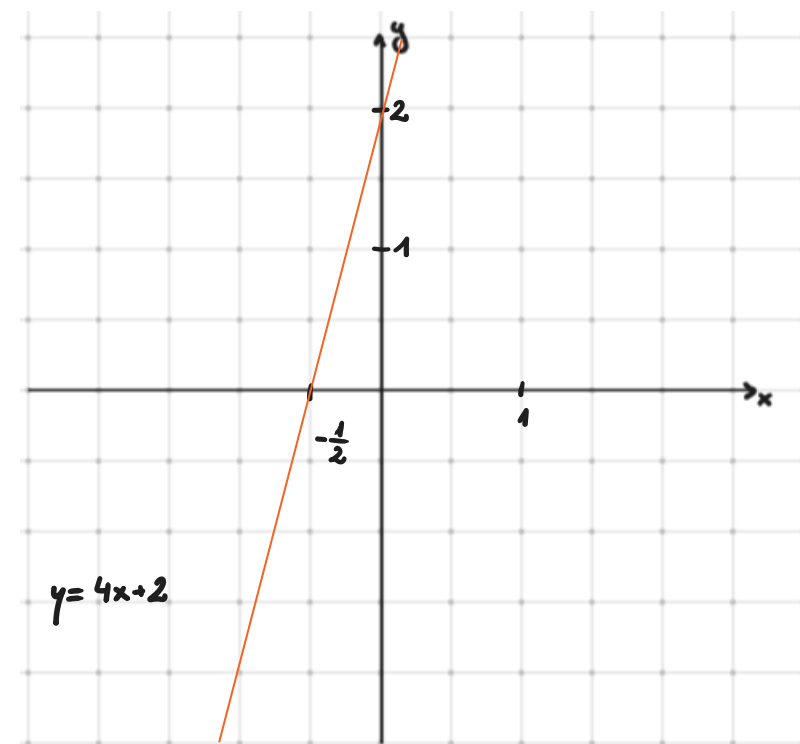

c) $y = 4x + 2$

$$f(0) = 4 \cdot 0 + 2 = 2$$

$$f(x) = 0$$

$$4x + 2 = 0$$

$$x = -\frac{1}{2}$$

b) $y = \frac{1}{2}x - 3$

$$f(0) = \frac{1}{2} \cdot 0 - 3 = -3$$

$$f(x) = 0$$

$$\frac{1}{2}x - 3 = 0$$

$$x = 6$$
